

## features

- Four different models
- Optimal lighting without any shadowing or glaring
- Playing field and the opponent are made clearly visible
- No heating up
- Attaches to any table
- Assembles with ease - requires no tools
- Slim, lightweight and foldable
- Uses long-lasting LED-technology
- Optional: run with your power bank
- Optional: custom colour and lettering

## attaching

The Libero Floodlight can be mounted **1.** straight - from goal to goal, or **2.** diagonally - from corner to corner. If necessary, it can also be mounted anywhere in between.

Attaching it **2.** diagonally provides the following advantages:

- The goalkeeper has a clearer view of the “goal line”
- Accessing the point scorer is easier

## place the magnets

The Libero Floodlight is attached using 2 high power magnets. The magnets are fixed on the “goal box” of the table.

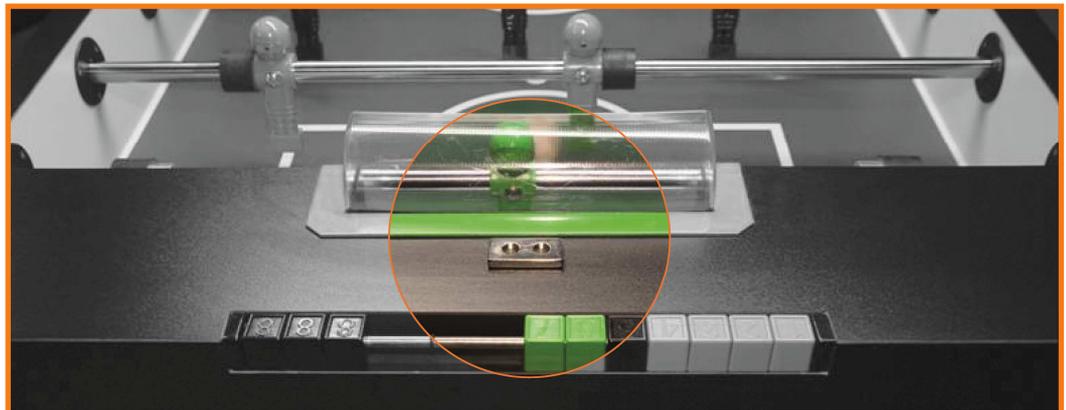

## attaching the magnet

### The different methods available:

1. Attachment using adhesive tape.  
Advantage: easily detachable.  
**Please note:** you will have to wait 1h.
2. Attachment using screws.  
Advantage: very durable.
3. Attachment using Sugru.  
Advantage: strongly holds in place (can also be applied to oiled wood), can be detached.  
**Please note:** surface should be grease free, if possible. You will have to wait 24 h. A closed Sugru package will last 6-12 months. Learn more at [www.sugru.com](http://www.sugru.com).

**Adhesive tape and screws are included in delivery.**

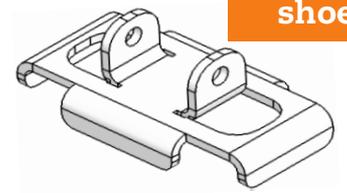

### Warning about the High Power (Neodym) Magnets

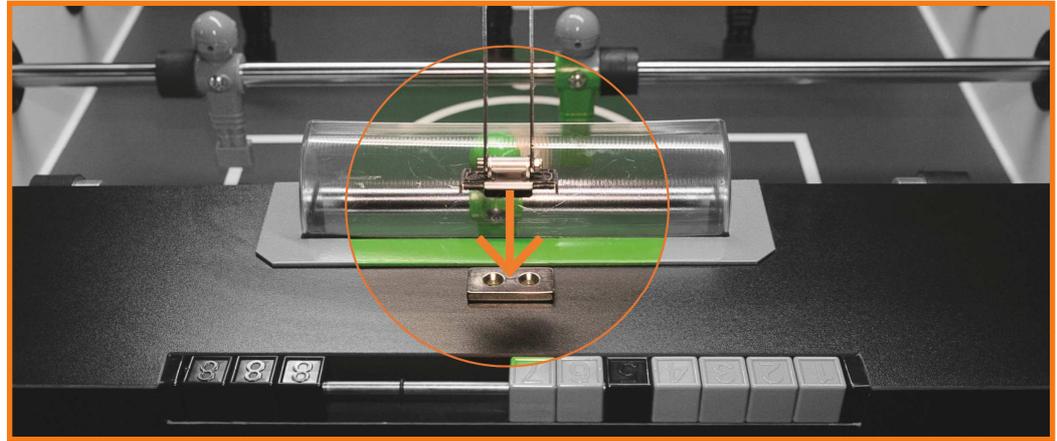

- Handle with care! Otherwise you run the risk of trapping your fingers between the 2 magnets.
- Neodym magnets can break, e.g. when they are dropped, when they slam together or when a metal screw is tightened too strongly.
- Do not keep hard disks, floppy disks etc. near the magnets, as the data could be erased off.

attaching

The “shoe” on both ends of the Floodlight must - on all 4 sides - be positioned completely above the magnets.

shoe

Libero Floodlight attached

1 straight

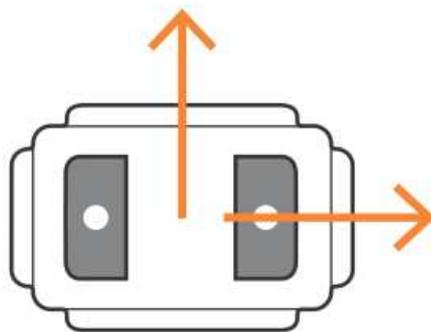

2 diagonally

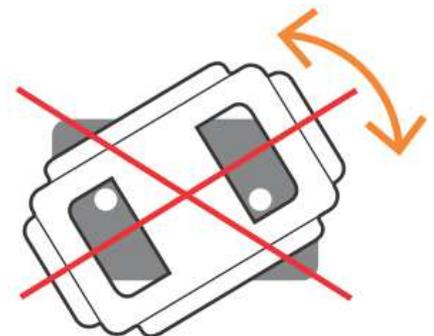

detaching

**Attention: tilt, not turn!**

To detach the Libero Floodlight, **tilt** the shoe over one edge of the magnet. Do not turn the Floodlight, as the magnet will also be turned and it may be released!

tilt ...

... not turn!

Set Powerbank

## using a power bank

The Libero Floodlight can also be powered by use of a power bank - so you can continue using the table outside and play into the night. Life of our (very big) power bank: 8-10 h.

### Power bank & converter:

Every power bank can be used – even that one, which you already use for your devices. However, a special converter is necessary to convert the 5 Volt of the power bank to the 12 Volt of the floodlight. You can buy the converter in our shop.

Converter

## floodlight: technical data

Length 103 cm  
 Weight 900 g  
 Bulb 120 LED, 12 V, 10 Watt  
 Energy efficiency class: A+
